While the RCX-1500 CD player is an all-in-one model, it has been engineered using components that you would find in more expensive separates. The DAC is the high-performance Wolfson with 24 bit / 192kHz decoding. The amplifier uses our innovative Class D design that is highly efficient, runs cooler than older A/B designs and provides plenty of voltage and current to easily drive lower impedance speakers down to 4 ohms. With 100 watts per channel available, feel free to hook up large floor-standing loudspeakers to the RCX-1500.

The receiver’s tuner section includes both terrestrial FM and Internet so your listening options are virtually limitless! There are presently over 15,000 Internet radio stations listed. And in order to help keep your favorite stations handy, the RCX-1500 includes 30 possible presets for instantaneous access to both FM and Internet broadcasts. A wireless Dongle (802.11) is provided for Ethernet connection or you may choose to use a wired connection.

The RCX-1500, like the RDG-1520, supports UPnP technology. UPnP devices are “plug-and-play” in that when connected to a network they automatically announce their network address and supported device and services types, enabling clients that recognize those types to immediately begin using the device. Supported codecs include RealAudio®, WMA, MP3, AAC, AU, WAV and AIFF.

As if all that isn’t enough, an RS-232 port provides system control and bi-directional feedback. In addition, the RCX-1500 is also a very high quality CD player, based on our outstanding RCD-1520.

The RCX-1500 is without doubt, one of the most flexible, high performance, single chassis stereo components available today.

The receiver's tuner section includes terrestrial FM and Internet radio, so your listening options are virtually limitless! There are presently over 15,000 Internet radio stations listed. In order to help keep favorite stations handy, the RCX-1500 includes 30 possible presets for instantaneous access to both FM and Internet broadcasts. You can connect a lap top directly to the RDG-1520 if this is your preference. Or you can stream from your PC using Windows Media Player 11 over a wireless or wired Ethernet connection. A USB to WiFi Ethernet dongle is included. Supported codecs include RealAudio®, WMA, MP3, AAC, AU, WAV and AIFF.

The RDG-1520 can be controlled via bi-directional RS-232, as well as discrete IR. Custom integrators will appreciate that the chassis is a standard 2U size and it works with Rotel's RFK rack kits for an easy, clean installation.

You might think the RDG-1520 would be a multi-thousand dollar component, given all that it does and the high-performance design. The few similar units on the market are indeed very expensive. But the RDG-1520 offers the value proposition that Rotel is known for around the globe.

CD players have been around for over twenty-five years and have enjoyed such a progression of quality that they can hardly be compared to the original players released in 1982. Rotel has enjoyed a class leading reputation with our CD player designs since the introduction of the landmark RCD-855 in 1990, pronounced by critic Lewis Lipnick from Stereophile magazine Vol.13, No. 7 as "The steal of the century!"

Now, with the release of the RCD-1520, we have produced a CD player that sets a new standard for the 21st century, taking full advantage of the vast wealth of music now available on compact discs. The RCD-1520

utilizes a segmented power supply with a large toroidal transformer to minimize power supply "sag" and reduce hum emissions. All rectifiers, voltage regulation components and BHC low-ESR storage capacitors are carefully selected, not only for tight tolerance specifications, but in particular, for their sound quality. Both analog and digital circuits undergo this careful scrutiny. For the digital domain, we have specified the superb Wolfson DAC for advanced digital filtration and D/A conversion and Burr Brown low distortion op amplifiers. The CD transport is a high performance slot loading mechanism. The result of this attention to detail is a CD player that will remain a part of your reference audio system for years to come.

A preamplifier must keep the audio signal as pure as possible, while amplifying and routing various source signals to the power amplifier. The goal of the engineer is to achieve "a straight wire with gain" design, nothing more and nothing less. Of course, the realization of this goal is much harder than it seems, but Rotel's experience and meticulous circuit design has produced a string of exceptional stereo preamplifiers over the years, which has been taken to new heights in the RC-1580.

The RC-1580 is designed for the hi-fi purist in terms of its minimalist approach and absolute musical fidelity. Component parts, such as an oversized toroidal power transformer and special BHC capacitors, along with circuit topology, have been carefully selected to obtain the best sound possible. For those who want the best of both audio and video worlds a unity gain stage has been included to enable a surround processor to feed straight through to the power amplifier thereby bypassing the volume control. The RC-1580 includes a low noise MM/MC phono with discrete, differential input stages, as well as CD, Tuner, and two AUX inputs. The preamplifier can be controlled by RS-232, or IR input. A tone defeat, media input socket, headphone socket and remote control is included.

Rack installations made easy.

Rotel 15 series cabinets are sized for the EIA "U" height standard used for professional equipment. One U is equal to 1.75". Many custom installations benefit from rack mounting. Rack height designs negate any space wastage when placing products one on top of another in the rack. Rotel can supply a matching cost effective rack rail kit that is available for 20" or 26" depths as well as trim parts. A rail will support up to 5U high models. Products lock into the rack with a rear screw securing them for transportation.
